It currently consists of 6 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```
cc stimulating hormone (FSH). FSH is a heterodimeric gonadotropic hormone cc secreted by the pituitary gland. It consists of two subunits, referred cc to as alpha and beta. The protein is used to produce compositions of the invention. The specification describes a stabilized dry powder composition for delivery of a FSH to the deep lung of a mammalian cc subject. The compositions promotes ovarian follicular development. The cc composition is useful for treating female infertility.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DNA encoding an alpha subunit variant of a follicle stimulating hormone.
                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence encodes an alpha subunit variant of a follicle stimulating hormone (FSH). FSH is a heterodimeric gonadotropic hormone secreted by the pituitary gland. It consists of two subunits, referred to as alpha and beta. The protein is used to produce compositions of the invention. The specification describes a stabilized dry powder composition for delivery of a FSH to the deep lung of a mammalian subject. The compositions for mammalian follicular development. The composition for treating female infertility.
                                                                                                                                                                                                                                                                                                                           Stabilized dry powder composition for delivery to the deep lung comprising follicle-stimulating protein (FSP) and an excipient, useful for the treatment of female infertility -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           8
                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to substantially pure prostate-specific or testis-specific polypeptides and the nucleic acids encoding them. Also included are vectors and host cells expressing the proteins, a Also included are vectors and host cells expressing the proteins, antibodies against the proteins, probes for detecting the nucleic acids, antisense molecules for the nucleic acids and methods of isolating modulators of the proteins. Compounds that modulate the prostate specific or testis specific polypeptide are useful to diagnose, prevent or treat disorders of the testis or prostate particularly prostate cancer, benign or prostatic hyperplasia, acute prostatils, testicular cancer, benign cryptorchidism, undescended, retractile, ascending or vanished testis. Other prolliferative disorders for which the modulators may be used include lymphoma, leukaemia, melanoma, ovarian cancer, breast concer, parent concer, breast concer, parent cancer, process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; Six-Transmembrane Protein of Prostate 1; STMP1; prostate cancer;
                                                                                                                                                                                                                                                                                                                                               New polynucleotide for the diagnosis, prevention and treatment for prostate and testis disorders, particularly prostate cancer, comprises prostate-specific or testis-specific nucleic acids
benign prostatic hyperplasia; acute prostatitis; testicular cancer; cryptorchidism; testicular disorder; proliferative disorder; lymphoma; leukaemia; melanoma; ovarian cancer; breast cancer; pancreatic cancer; liver cancer; lung cancer; cytostatic; ss.

The invention relates to substantially pure prostate-specific or testis-specific polypeptides and the nucleic acids encoding them. Also included are vectors and host cells expressing the proteins, artibodies against the transgenic animal expressing the protein, antibodies against the proteins, probes for detecting the nucleic acids, antisense molecules of for nucleic acids and mathods of isolating modulators of the proteins. Compounds that modulate the prostate specific or testis specific polypeptide are useful to diagnose, prevent or treat disorders of the testis or prostate particularly prostate cancer, banign prostatic hyperplasia, acute prostatitis, testicular cancer, cryptorchidism, undescended, retractile, ascending or vanished creatis. Other proliferative disorders for which the modulators may be used include lymphoma, leukaemia, melanoma, ovarian cancer, breast cancer, pancreatic cancer, liver cancer and lung cancer. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            present sequence represents partial exon 6/3' UTR sequence of a prostate specific protein, Six-Transmembrane Protein of Prostate 1, STMP1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              DNA encoding an alpha subunit variant of a follicle stimulating hormone.
benign prostatic hyperplasia; acute prostatitis; testicular cancer; cryptorochidism; testicular disorder; proliferative disorder; lymphoma; leukaemia; melanoma; ovarian cancer; breast cancer; pancreatic cancer; liver cancer; lung cancer; cytostatic; ds; exon 6.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New polynucleotide for the diagnosis, prevention and treatment for prostate and testis disorders, particularly prostate cancer, comprises prostate-specific or testis-specific nucleic acids
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

polypeptide (II) sequences. (I) is useful as hybridisation probes, polypeptide (I) sequences. (I) is useful as hybridisation probes, and gene mapping, and in recombinant production of (II). The and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques or restore normal activity of (II) susful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and anino acid sequences. AAS64197-AAS94564 represent novel human DNA and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                diagnostic coding sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO

STEAP is a member of cell surface serpentine transmembrane antigens. STEAP-2 gene is located on chromosome 7q21 and is used in gene therapy. Inhibiting the development or progression of a cancer (eg. prostate, colon, bladder, lung, ovarian and pancreatic) expressing STEAP or inhibiting growth or killing cells composition to the patient. Treating a patient with a cancer that comprises administering to the patient a vector encoding single chain monoclonal antibody that comprises the variable domains of the heavy and light chains of the monoclonal antibody that specifically binds to STEAP. Such that the vector delivers the single chain monoclonal antibody is expressed intracellularly.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New STEAP (six transmembrane epithelial antigen of the prostate) proteins, expressed in human cancers, useful for detecting and treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Faris M;

The invention relates to substantially pure prostate-specific or testis-specific polypeptides and the nucleic acids encoding them.
Also included are vectors and host cells expressing the proteins, a transgenic animal expressing the protein, antibodies against the proteins, probes for detecting the nucleic acids, antisense molecules for the nucleic acids and methods of isolating modulators of the proteins. Compounds that modulate the prostate specific or testis specific polypeptide are useful to diagnose, prevent or treat disorders of the testis or prostate particularly prostate cancer, benign of the testis or prostate practicularly prostate cancer, cryptorchidism, undescended, retractile, ascending or vanished testis. Other proliferative disorders for which the modulators may be used include lymphoma, leukaemia, melanoma, ovarian cancer, breast cancer, pancreatic cancer, liver cancer and lung cancer. The present sequence represents the second open reading frame of a prostate specific protein, Six-Transmembrane Protein of Prostate 1, STMPI.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human six transmembrane epithelial antigen of prostate-2 clone GTD3 cDNA.
                                                                                                                                                                                      New polynucleotide for the diagnosis, prevention and treatment for prostate and testis disorders, particularly prostate cancer, comprises prostate-specific or testis-specific nucleic acids
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /*tag= b

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to substantially pure prostate-specific or testis-specific polypeptides and the nucleic acids encoding them.

Also included are vectors and host cells expressing the proteins, a transgenic animal expressing the protein, antibodies against the proteins, probes for detecting the nucleic acids, antisense molecules for the nucleic acids and methods of isolating modulators of the proteins. Compounds that modulate the prostate specific or testis specific polypeptide are useful to diagnose, prevent or treat disorders of the testis or prostate particularly prostate cancer, benign prostatic hyperplasia, acute prostatitis, testicular cancer, cryptorchidism, undescended, retractile, ascending or vanished testis other proliferative disorders for which the modulators may be testis other proliferative disorders for which the modulators may be caucer, panoreatic cancer, liver cancer and lung cancer, breast cancer, panoreatic cancer, liver cancer and lung cancer. ```
The invention relates to substantially pure prostate-specific or testis-specific polypeptides and the nucleic acids encoding them. Also included are vectors and host cells expressing the proteins, a transgenic animal expressing the protein, antibodies against the proteins, probes for detecting the protein, antibodies against the proteins. Compounds that modulate the prostating modulators of the croteins. Compounds that modulate the prostate specific or testis specific polypeptide are useful to diagnose, prevent or treat disorders of the testis or prostate particularly prostate cancer, benign or prostatic hyperplasia, acute prostatitis, testicular cancer, cryptorchidism, undescended, retractile, ascending or vanished testis. Other proliferative disorders for which the modulators may be testis. Other proliferative disorders for which the modulators may be cancer, pancreatic cancer, liver cancer and lung cancer, breast cancer, pancreatic cancer, liver cancer and lung cancer. The present sequence encodes a prostate specific protein, Six-Transmembrane
New polynucleotide for the diagnosis, prevention and treatment for prostate and testis disorders, particularly prostate cancer, comprises prostate-specific or testis-specific nucleic acids
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; chromosome mapping; gene mapping; gene therapy; forensic; food supplement; medical imaging; diagnostic; genetic disorder; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                             ò
                    This sequence represents CDNA encoding human prostate growth-associated protein PGAMP-1. Nucleotides encoding PGAMP-1 were initially identified in a prostate cDNA library, this sequence representing a consensus. Human prostate growth associated membrane proteins PGAMP-1 and PGAMP-2 (AAY52590) may be used to raise specific antibodies and to screen for specific modulators (agonists, antagonists or other potential therapeutic agents). Antagonists of PGAMP are used to treat or prevent wide range of cancers (solid tumours, leukaemia, lymphoma etc.) and represented sisorial syndrome, prostatitis). PGAMP-encoding nucleic acids, its fragments and complements, may be used for recombinant production of PGAMP proteins, in gene therapy (e.g., as antisense melecules, triplexforming molecules and ribozymes), and as diagnostic probes and primers. Committing molecules may be used for diagnosis and monitoring of antagonists (including targetted delivery of other drugs), and in competitive drug screens.
                                                                                                                                                                                                                                                                                               ö

                                                                                                                                        transgenic animal expressing the protein, antibodies against the proteins, probes for detecting the nucleic acids, antisense molecules for the nucleic acids and methods of isolating modulators of the proteins. Compounds that modulate the prostate specific or testis specific polypeptide are useful to diagnose, prevent or treat disorders of the testis or prostate particularly prostate cancer, benign prostatic hyperplasia, acute prostatitis, testicular cancer, cryptorchidism, undescended, retractile, ascending or vanished testis. Other proliferative disorders for which the modulators may be used include lymphoma, leukaemia, melanoma, ovarian cancer, breast cancer, cancer, percent and lung cancer. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (SAAT/) SAATCIOGLU
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   P-PSDB; AAU10187
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AO200172962-A2
```

```
The invention relates to substantially pure prostate-specific or testis-specific polypeptides and the nucleic acids encoding them.

Also included are vectors and host cells expressing the proteins, a transgenic animal expressing the protein, antibodies against the proteins, probes for detecting the nucleic acids, antisense molecules for the nucleic acids and methods of isolating modulators of the proteins. Compounds that modulate the prostate specific or testis specific polypeptide are useful to diagnose, prevent or treat disorders of the testis or prostate particularly prostate cancer, benign prostatic hyperplasia, acute prostaticitis, testicular cancer, cryptorchidism, undescended, retractile, ascending or vanished cryptorchidism, undescended, retractile, ascending or vanished used include lymphoma, leukaemia, melanoma, ovarian cancer, breast cancer, pancreatic cancer, liver cancer and lung cancer, the modulators may be used include lymphoma, leukaemia, melanoma, ovarian cancer, pressent sequence represents partial exon 6 sequence of a prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      .;

ö
testis-specific polypeptides and the nucleic acids encoding them.
Also included are vectors and host cells expressing the proteins, a transgenic animal expressing the protein, antibodies against the proteins, probes for detecting the protein, antibodies against the proteins, probes for detecting the nucleic acids, antisense molecules for the nucleic acids and methods of isolating modulators of the proteins. Compounds that modulate the prostate specific or testis or prostate particularly prostate cancer, benign prostatic hyperplasia, acute prostatics, testicular cancer, benign prostatic hyperplasia, acute prostatics, testicular cancer, cryptorchidism, undescended, retractile, ascending or vanished testis. Other proliferative disorders for which the modulators may be used include lymphoma, leukaemia, melanoma, ovarian cancer, breast cancer, pancreatic cancer, liver cancer and lung cancer. The cancer according or present sequence represents each of of a prostate specific protein, six Transmembrane protein of Prostate 1, STMP1, alternatively
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New human prostate growth-associated membrane proteins, for treating or preventing cancer and reproductive disorders

It currently consists of 10 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

consists of 29 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
